

LETTERS TO THE EDITOR

Evolutionary process

Horticulture is an evolutionary process. It molds the experience of the past to fit the present advancement in science and technology, and carries over current knowledge to future improvement in gardening.

Since its inception 69 years ago, the **Spartanburg Men's Garden Club** has been active in promoting the importance of gardening in our daily life. The mission of the nonprofit organization is "to educate and inspire the public to higher standards of horticulture through volunteerism." The strength of the club is derived from the 88 women and men members coming from different ages, backgrounds and professions.

But there is a deeper meaning behind this long history and the accomplishments of the organization. The concept of involvement of more and more people of diverse views toward one noble goal of serving the Spartanburg

community is, by itself, a great success story.

The 7 p.m. educational meeting on the third Monday of every month at Spartanburg Community College is a learning opportunity in addition to updating the members and guests to more efficient methods of gardening.

For more information, write to the Spartanburg Men's Garden Club, P.O. Box 1502, Spartanburg, S.C., 29307.
